Art Unit: 2665

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-5, 7-13, drawn to a method and apparatus for testing connectivity of transmission links, classified in class 370, subclass 248.

II. Claims 14-59, drawn to an inverse multiplexing system, method and apparatus, classified in class 370, subclass 392.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombination and combination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because an inverse multiplexing system, method or apparatus does not require the particular feature of connectivity verification of the transmission links, and the subcombination has separate utility such as connectivity testing device.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
